

Dividing a 2-digit number by a 1-digit number ①

① Share 28 apples equally between 2 baskets.

$$2 \text{ tens} \div 2 = \boxed{} \text{ ten}$$

$$20 \div 2 = \boxed{}$$

$$8 \text{ ones} \div 2 = \boxed{} \text{ ones}$$

$$8 \div 2 = \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

$$28 \div 2 = \boxed{}$$

Each basket has $\boxed{}$ apples.

2 a) Work out $69 \div 3$.

$$6 \text{ tens} \div 3 = \boxed{} \text{ tens}$$

$$60 \div 3 = \boxed{}$$

$$\boxed{} \text{ ones} \div \boxed{} = \boxed{} \text{ ones}$$

$$\boxed{} \div \boxed{} = \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

$$\text{So, } 69 \div 3 = \boxed{}$$

b) Work out $88 \div 4$.

$$\boxed{} \text{ tens} \div \boxed{} = \boxed{} \text{ tens}$$

$$\boxed{} \div \boxed{} = \boxed{}$$

$$\boxed{} \text{ ones} \div \boxed{} = \boxed{} \text{ ones}$$

$$\boxed{} \div \boxed{} = \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

$$\text{So, } 88 \div 4 = \boxed{}$$

3 Divide 85 by 5 by dividing the tens first and then the ones.

Show your method.

4 Work out the division calculations that Luis is trying to solve.

a) $\square \div 3 = 32$

$90 \div 3 = 30$

$\square \div 3 = 2$

b) $\square \div 2 = \square$

$\square \div 2 = 40$

$6 \div 2 = 3$

5 Use 4 different digits to complete the calculation below.

1 2 3 6 9

$\square \square \div 3 = \square \square$

How many different answers can you find?

CHALLENGE

Reflect

● To work out $84 \div 4$, first I would _____

● Then I would _____

● Finally, I would _____

● _____
